title(['Voltage over time for ' num2str(f) ' Hz input']);
hold off;

% play model
% w = waitforbuttonpress;
% playSound(Vin, (1/h));
% w = waitforbuttonpress;
% playSound(Vc_out, (1/h));
% w = waitforbuttonpress;
% playSound(Vr_out, (1/h));
end

exportgraphics(gca, "9000HzCircuitAB.eps", "Resolution", 300);
```

```
exportgraphics(gca, "50HzCircuitAB.eps", "Resolution", 300);
```

Setup, compute, and plot transfer functions $H(f)$

```
freq = 10:10:10000; % vector of 1000 frequency values spanning (10 -
10k) hz

Hc = zeros(1, length(freq));
Hr = zeros(1, length(freq));

% calculate Hc and Hr
for i = 1:length(freq)
    period = 1/(freq(i));
    t = 0*period:h:25*period;
    vin = sin(2*pi*freq(i)*t);
    vc_out = circuitA(vin, h, R, C);
    vr_out = vin - vc_out;

    Hc(i) = max(vc_out)/max(vin);
    Hr(i) = max(vr_out)/max(vin);
end

% plot the transfer functions H(f)
figure();
semilogx(freq, Hc, freq, Hr, 'linewidth', 2);
```

```

set(gca, 'linewidth', 2);
set(gca, 'fontsize', 14);
xlabel("Frequency (hz)")
ylabel("H(f)");
legend("H(f)_{c}", "H(f)_{r}");
title ("Transfer function");
exportgraphics(gca, "transferFuncAB.eps", "Resolution", 300);

```
